

When a project is created, and a Unique URL is chosen, you'll need to purchase and configure the URL to work with your Property Website.

1. Ensure that the Unique URL "Enable" box is checked on the Project Dashboard page. If you do not see the Unique URL section, confirm the Domain Add-on feature is enabled. Instructions available [here](#).

The screenshot shows a two-column form. The left column is titled "Address of Photo Shoot" and contains fields for "Address" (123 Main Street), "City" (AnyTown), "State" (California), "Zip" (92270), and "Gate Code". Below this is a section for "Select a Community/Subdevelopment" with a "Community/Subdevelopment Name" field, a "Community/Subdevelopment Gallery" dropdown (set to "Select Community"), and a "View Gallery" button. A "Create Community" button is at the bottom. The right column shows "Package selected: Media First + Online Marketing Core (\$200.00)" and "Addons selected: Social Plus (\$35), Realtor.com (\$25)". A blue "Unique URL" section is highlighted with a red circle, containing a checked "Enable (\$30)" option with the text "This option is for the purchase of a unique URL or web address for your property website". Below this is a "Website URL" field (123MainStreet.com) and a "Check for availability" button. A link "Go here for instructions on setup." is at the bottom.

**Purchasing a Unique URL** - Unique URLs may be purchased through a registrar such as GoDaddy.com or MadDogDomains.com. In the steps below, we will use the MadDogDomain website for our example. Your registrar may use different terminology.

*We recommend registering domains for 1 year and turning the "Auto-Renew" feature off. Listings will usually sell or expire within 12 months.*

1. Once you've purchased a domain, click the "Manage Domain" button next to your domain name.
2. Click on "Manage DNS".

The domain "Records" section will need to be edited with the following:

3. Edit the "A" record by clicking on the "pencil" to the right. Under the first line: "A (Host)" section, Use **50.63.202.1** as the IP address. This points the domain name to the Full Frame servers.

## Records

Last updated 1/9/2017 1:29 PM

Type	Name	Value	TTL	
A	@	50.63.202.1	600 seconds	

4. Under the "CName (Alias)" section, edit "www" so that it points to "**listing.gofullframe.com**". This step point the domain name to the Property Website section of the Full Frame servers.

CNAME	www	listing.gofullframe.com	1 Hour	
CNAME	_domainconnect	_domainconnect.ss.domaincontrol.com	1 Hour	

The domain "Forwarding" section will need to be edited with the following:

5. In the forwarding field, labeled "http://" Add the unique URL for this project. I.e., "[www.123testingst.com](http://www.123testingst.com)". This allows for the link to work, even if "www" is not used in the address.

**Creating a Host** - While on the project dashboard in the Full Frame admin center, click on the “Unique URL” menu item.

MANAGE PROJECT   Main   Instructions & Notes   Photos   Panos   Videos   Virtual Tour   Flyer   Downloads & Links   Transfer / Co-listing   **Unique URL**

6. Click on the “Create Host” button. This will let your registrar know where to point your Unique URL on the Full Frame servers.

Create Host for Unique URL CLOSE

---

**Domain Name** 123MainStreet.com  
(You can change this on the main project page)

---

**Name Servers for Domain Registration** NS25.DOMAINCONTROL.COM  
NS26.DOMAINCONTROL.COM

---

**Dedicated Virtual Server CNAME** client.flashitfirst.com

**Create Host**

This completed the Unique URL setup.

It may take up to 24 hours for this setup to function, however, we have found that 15-30 minutes is not uncommon. When testing the link, be sure to “refresh” your browser each time you test.
